# Breast cancer clinical trials: Patient experiences, preferences, and insights into increasing participation

# **Research rationale**

Clinical trials offer breast cancer patients access to the most innovative treatments, high levels of care and hope for a better future. Yet, fewer than 5% of individuals with breast cancer participate in clinical trials nationally. Education is commonly identified as a target for intervention to increase rates of participation.

In late 2015, the Cancer Support Community (CSC) conducted an online survey assessing cancer clinical trials to inform development of an educational program aimed to increase clinical trial awareness and participation. Results from this survey highlighting the experiences, beliefs, and preferences of breast cancer patients are reported here.

### **Research objectives**

- To better understand the perceptions and awareness of clinical trials among individuals diagnosed with breast cancer
- To better understand how their experiences receiving information about clinical trials matched their preferences
- To inform the development of an educational program to increase clinical trial awareness and participation

### Frankly Speaking About Cancer program background

The Frankly Speaking About Cancer (FSAC) series provides in-depth coverage of topics relevant to those affected by cancer that are often not otherwise available in a comprehensive format.

Topics covered include: metastatic breast cancer, lung cancer, skin cancer, colorectal cancer, cancer treatments and side effects, new discoveries, and coping with the cost of care. Frankly Speaking About Cancer is delivered through multiple modalities, including in-person workshops, webinars, print publications, online content, and a weekly radio show.

The newest addition to this series is Frankly Speaking About Cancer Clinical Trials, which is an initiative aimed at increasing patient and caregiver awareness and knowledge of cancer clinical trials to boost participation rates. For more information about this program or its products, please visit our website at:

# Claire Saxton, MBA, Marni Amsellem, PhD, and Joanne Buzaglo, PhD **Cancer Support Community, Washington D.C. Presented at the 2016 San Antonio Breast Cancer Symposium**

### Methods

### **Respondents:**

• In 2015-2016, 506 cancer patients and 81 caregivers participated in a national online survey assessing experiences with clinical trials conducted by CSC • Survey recruitment via CSC's Cancer Experience Registry, CSC social media, and our partners 239 individuals with breast cancer (47.2% of respondents with cancer) participated

### Survey Measures:

- Background/demographic characteristics
- Cancer history (breast cancer diagnosis)
- Treatment setting(s)
- Current treatment status
- Knowledge and beliefs about clinical trials
- Communication about cancer clinical trials
- Participation in clinical trials
- Informational preferences regarding clinical trials
- Resources provided/ found about clinical trials

### **Respondent characteristics** (n=239)

### **Background Characteristics:**

- Age: M = 59.6 years (SD = 9.7 years)
- Sex: 99.6% female
- Racial/ Ethnic Identification:
  - 84.9% Caucasian
  - 10.0% African-American
  - 1.7% American Indian
  - 1.3% Asian
  - 6.6% Hispanic
- Highest Level of Education
  - High school, trade school, or GED 5.5% 25.7% Some college • 32.9%
    - Bachelor degree
  - 35.9% Graduate degree or higher

### **Breast Cancer History:**

• 21.4% diagnosed with metastatic breast cancer

- 22.4% had experienced a recurrence
- 45% were currently receiving treatment
- 75.2% were considered to be in remission

### Year of Initial Diagnosis:

44.5% were diagnosed 2011 or after 16.4% were diagnosed 2014 or after

### **Treatment setting (initial):**

28.0%	Academic or comprehensive cancer center
38.9%	Community hospital/cancer center
25.9%	Private oncology practice
0.4%	Veterans Affairs (VA) hospital/medical center
2.5%	Family practice/primary care physician

32.5% have changed treatment setting

• For those who had changed, 55.2% are now at an academic or comprehensive cancer center

• 28.3% of the time, trials were discussed at diagnosis • 73% of the time, trials were introduced by healthcare team; 17.6% of the time it was initiated by the patient

Another health care professional (e.g. nurse)

0% 10% 20% 30% 40% 50% 60% 70% • When clinical trials were discussed, less than half felt their goals and concerns re: participation were meaningfully addressed (regardless of who initiated discussion)

No, my goals were not part of the discussion It was discussed but not in detail

Yes, I have participated in the past but I am not currently on a trial

No, I have not participated in a clinical trial (never considered and had considered)

• 35.8% have participated in breast cancer clinical trials 57.9% had never considered participating in a clinical trial

# **Clinical trials resources offered/used**

### esources

A website t Time with n

### Summary

Results from this survey describe the experiences and preferences of individuals with breast cancer as it relates

• Over half of patients with breast cancer have had discussions about clinical trials. During these conversations, most report that their concerns about or goals for participating in trials were not meaningfully

• Over one third have participated in breast cancer clinical trials, suggesting that this sample is likely more aware of and/or interested in clinical trials than the general population of cancer patients

• There is a meaningful discrepancy between what patients find valuable in decision-making and information-gathering and what resources are available

• The survey data yields insight into the contents of a successful education and support program around clinical trials and highlights the necessity to provide a comprehensive program that addresses patient preferences for more time to discuss clinical trials with the oncology team and with other patients who had elected to participate in a clinical trial

Based in part on these findings CSC, along with partner organizations are developing a series of products and programs to educate individuals who may be eligible for
