Stage III Melanoma Care Plan

What’s a care plan? It’s a roadmap to guide your cancer care following your diagnosis of stage III melanoma. Your care plan should:

- Summarize your diagnosis
- Provide information about the treatments you have had or are currently taking
- Tell you the best person on your medical team to contact with questions or concerns
- Provide information about symptoms or side effects you might experience and who you should call if you need help managing them
- Explain what type of follow-up care you should receive and who will be providing it

Some people ask their doctor to complete their care plan. Some fill it out with their doctor. And some choose to fill it out on their own and then ask their doctor to review it. You should do what feels most comfortable for you.

When you discuss your care plan with your doctor, you may want to think of yourself as both a patient and a self-advocate. This can include asking questions such as:

- Do I understand everything on my treatment summary and care plan?
- Is there anything I want to add to my care plan?
- Was I told all my treatment options?
- Have I asked about clinical trials?
- Have I talked to my doctor about my treatment goals?
- Have I talked to my doctor about my concerns?
- Do I know what my treatment will cost and how I will pay for it?
- Do I need to get information on pharmaceutical assistance programs?
- Do I want to get a second opinion before starting treatment?
- Do I know who I will call if I develop symptoms and side effects?
- Is there anything else I need?

_______________________________________________________________________________________

Your Cancer Journey: A stage III melanoma diagnosis means you will need to find a way to both live your life to the fullest possible while also being aware that you are at high risk for recurrence. This requires learning how to live with and alongside worry, rather than having worry rule your day-to-day experiences.
